Print length : 110 pages

Paperback : 136 pages

Item Weight : 5 ounces

Dimensions : 5 x 0.29 x 8 inches

Invasive terrestrial animals are a major threat to our planet. They can cause extensive damage to ecosystems, agriculture, and human health.

Invasive terrestrial animals are non-native species that have been introduced to an area outside of their natural range. They are often able to thrive in their new environment because they lack natural predators or competitors. This can lead to population explosions, which can have devastating consequences for native species and ecosystems.

Invasive terrestrial animals can cause a variety of problems, including:

- Competition with native species for food and resources
- Predation of native species

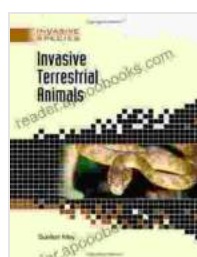

- Destruction of native habitats
- of diseases and parasites
- Economic losses to agriculture and forestry

Invasive terrestrial animals are a serious problem, but there are a number of things that can be done to address it. These include:

- **Prevention:** Preventing the of invasive terrestrial animals is the most effective way to protect our planet from their impacts.
- **Early detection and rapid response:** Early detection and rapid response to new infestations of invasive terrestrial animals can help to prevent them from becoming established.
- **Control and eradication:** Control and eradication of invasive terrestrial animals is necessary to protect native species and ecosystems.
- **Restoration:** Restoration of habitats that have been damaged by invasive terrestrial animals is important to help native species recover.

Invasive terrestrial animals are a major threat to our planet, but there are a number of things that can be done to address it. By working together, we can protect our planet from the impacts of these harmful invaders.
